

Ordering comparison — severity vs CAPEX-relatedburden (descending – ascending, n = 150 cases)

· Pass/fail verdict: 0 / 150 cases flip pass ↔ fail under reordering.
· Failure severity shifts modestly in a minority of cases (19 / 150 differ on years_of_shortfall, 38 / 150 on $|\Delta \text{ unmet}| > 0.1 \text{ Gt}$).
· Operational well-fleet burden differs more systematically (see Panel b).

Panel (b) encoding: box = IQR · whiskers = $1.5 \times \text{IQR}$ · dots = individual cases · colour = country · marker = model
